2025 Sagan Summer Workshop
Silver Jubilee: Exoplanet Demographics

Getting Started Guide: Google Colab

For the workshop hands-on sessions, the notebooks have been designed to run in Google Colaboratory. Users can download them and run them as Python Jupyter notebooks (there are embedded instructions for Python usage), but only Google Colaboratory is fully supported. In addition to following these instructions, please also run the Setup notebook(s) for the hands-on sessions you will be participating in.

Google Colaboratory allows you to execute Python in a browser without configuring Python on your local system. The Python code is run from a notebook environment similar to Jupyter notebooks, with execution and text cells. For a general introduction to Colaboratory, see:

What is Colaboratory?
https://colab.research.google.com/notebooks/intro.ipynb

Overview of Colaboratory Features
https://colab.research.google.com/notebooks/basic_features_overview.ipynb

If you are new to Python, Tim Brandt (STScI) has contributed an Introduction to Python Programming document.

Workshop Colaboratory Instructions

You will need:
- A free Google account which includes 15GB storage. https://www.google.com/account/about/
- Having 5GB of free space should be sufficient. If you do not have 5GB available or wish to keep your personal Google account separate from the workshop activities, we suggest creating a new Google account to maximize storage.

Verify that you have about 5 GB storage available:
1) Log into your Google account
2) Navigate to Google Drive by either following this link:
https://drive.google.com/drive/my-drive or, from your account, click on the dot navigation and then click on the Drive icon.
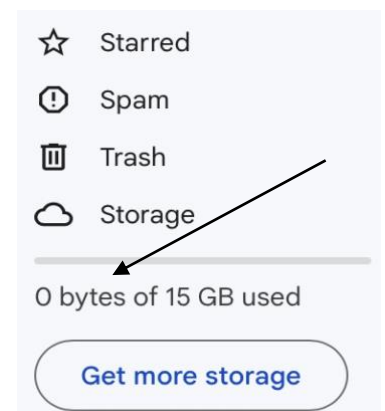

3) Once in Drive, on the left side menu, there is a section called "Storage" which will show how much space you have available. If you have insufficient storage in your Google account, we suggest creating a new account rather than purchasing storage. Note that if you reach the storage limit, it will affect your email usage, so it is better to create a new account.

SSW 2025 Notebooks

Copy the Notebooks individually to your Google Drive (see the step-by-step instructions below this section) or download the notebooks all at once and copy them into the "Colab Notebooks" directory in your Google Drive (or onto your local machine for Python Jupyter notebook usage) via the tar or zip format file.

Tar format: https://catcopy.ipac.caltech.edu/ssw/hands-on/SSW2025_notebooks.tar.gz
Zip format: https://catcopy.ipac.caltech.edu/ssw/hands-on/SSW2025_notebooks.zip

Hands-on Session I: Exoplanet Occurrence Rates

Group Project 2

Steps to copy the Notebooks to your Google Drive:

1) Log into your Google account with the available storage – make sure you have signed out of all other Google accounts if you have logged into more than one.

2) From the browser where you are logged into your Google account, enter the URL of the notebook (as shown above).

3) The notebook will open in your browser. You should see your profile/initial on the upper right side of the page. If you see "Sign in", log into your Google account.

4) Under the name of the notebook, you will see options like "File, Edit, View" etc. Click on "File" and then select "Save a Copy in Drive" (see image on the right).

5) You will be prompted to open the notebook in a new tab or window, and the notebook name will be prefaced with "Copy of". You can rename the notebook by clicking on its name. The
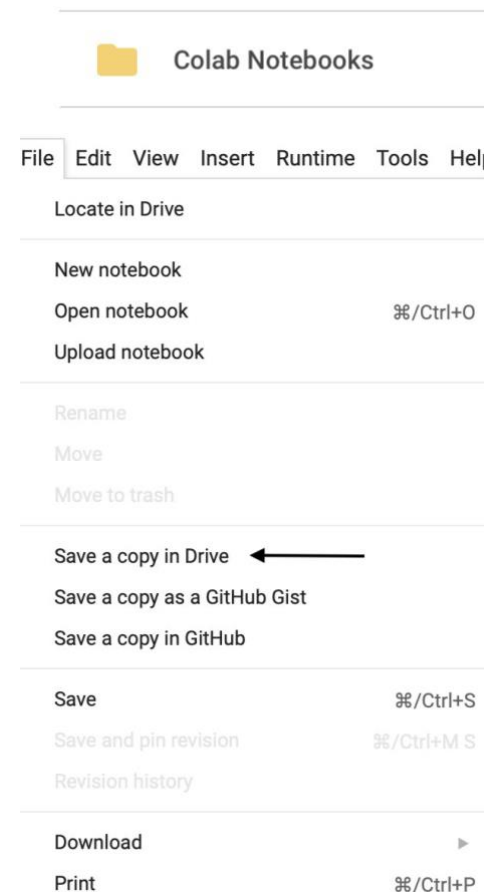

notebooks will be saved in your Google Drive at https://drive.google.com/drive/my-drive in a directory called "Colab Notebooks".

6) Close the notebook browser windows.

7) Repeat this process to save all the Google Colab Notebooks to your Google Drive.

Instructions for Using Colab Notebooks

Launching the Colab Notebook

1) Log into your Google account where you have saved the notebooks.
2) Go to your Google Drive: https://drive.google.com/drive/my-drive
3) Click on Colab Notebooks directory.
4) Click on the notebook you want to work on.

Running the Colab Notebook

For the hands-on activity notebooks, *you should step through each cell individually* by clicking on the right-facing triangle to the left of each cell (▶). Be sure to run all the initialization cells before the exercise cells. Note that some cells may be marked **Colab only** or **Python only**; run only the **Colab** ones.

Useful Colab Top Menu items

- **File** -> Save   Saves the file to your Google Drive
- **File** -> Download   Downloads a .ipynb (Jupyter Notebook) to your local machine
- **Edit** -> Clear all outputs   Clears the output from all cells
- **Runtime** -> Run all   Run all the cells. Can be run multiple times.
- **Runtime** -> Disconnect and delete runtime   Disconnects and exits the runtime, resetting the notebook variables back to its original state. This action is only useful if the notebook encounters an issue. It does not affect files downloaded to your drive. To restart the notebook, use the "Reconnect" button on the right.
- **Table of contents** – accessed via the three orange horizontal lines at the top left; clicking on them shows or hides the Table of contents.
- Closing the browser window stops the Colab instance.
